Dear Dr Wenqian Wang,

Re: Visiting scholar at the Department of Earth Sciences, University College London

I am writing to invite you as a visiting scholar to London Geochemistry and Isotope Centre (LOGIC) at University College London, for several short periods within the time from September 1st 2019 to February 28th 2020.

Our collaboration will focus on analyzing Li isotope ratios and trace element concentrations in material from the Carboniferous to Triassic periods. The goal is to understand the processes of weathering, climate control and biogeochemical cycling during this time. During your time here you will be working in our clean laboratories and with our mass spectrometers at the Department of Earth Sciences, University College London. Due to the amount of samples to be analyzed, we have agreed that several shorter visits are best.

I look forward to your visits.

Yours faithfully,

Dr Philip Pogge von Strandmann
